

## Resources and environment interface.

### Natural resources:-

\* Natural resources are the earth's natural materials that sustain all species including human beings.

\* There are goods and services produced by earth's natural resources.

### Principal of resources:

\* The fundamental principle of resources is that resource is that resources, even renewable are finite.

\* For Eg: air and water are in abundance and are very much renewable. But when they are polluted and degraded.

### Influence of environment on mankind

- (i) physical environment
- (ii) social and cultural environment
- (iii) Psychological environment.

They may be equipped under:

## Physical environment

(i) Physical environment refers to geographical climate and weather or physical condition where an individual lives. The human races are greatly influenced by climate.

Eg:

\* The human working efficiency which depends on the climate conditions

## Social Environment

\* Social Environment is an economic and political condition wherein he lives.

(i) An open society is very conducive for the individual development

(ii) A closed society is not very conducive for the development

## Psychological Environment

\* Although physical and social environment are common to the individual in a specific situation, his own psychological environment:

Kurt Lewin has used the term "life space" for explaining psychological environment.

Interface of Environment with resources.

- \* The physical factors in the environment in all respects.

- \* The different races of man shows adaptation to the different temperature of all region.

- \* There are some cordial interface of environment & resource

Growing population

The population is considered as an important resource, the growth of world population

- \* Population of over thousands of millions is growing at 2.11 per cent.

- \* over 17 million people are added each year.

- \* Yet to the very child in an earner, the development leads to growth rates

## Poverty

the poverty and environment degradation has a nexus b/w them. /

About 40% of our people are still below the poverty line.

The population growth is essentially a function of poverty.

## Agricultural Growth

The people must be acquainted with the methods to sustain and reverse agriculture growth with damage the environment

## Degradation of Land

Forest serve catchment for the rivers, with increasing demand of water.

These whole area are to be brought back under vegetation cover.

The degradation is to be avoided
